

MoldManager

The software for tool and mold making

YOUR SOFTWARE FOR TOOLMAKING

Many years of close cooperation with our customers in tool, mold, model and fixture making, have helped us to develop a product that is specially tailored to the needs of this industry. It combines an overview and information with rationality and speed when it comes to all administrative work involved in processing your orders and projects. It provides you with a precise overview of the processing status, allows you to identify impending cost overflows and relieves cost accountants, plant managers and administrative personnel of all business transactions.

The IOffice MoldManager is easy to use and quick to learn. It offers solutions on calculations, quality assurance, tool maintenance, administration, time recording, quotation, accounting and order management, storage and delivery, production planning, capacity planning, data management and much more and is also impressive thanks to its low investment costs and high performance.

As a specialist for project-oriented production, the IOffice MoldManager solves problems in tool and mold making and extends the system by offering integrated and practice-oriented capacity planning and project control in an existing ERP environment with SAP, WINCARAT, MS Dynamics, Infor, etc. IOffice MoldManager offers the complete solution from the enquiry to the invoice for a stand-alone toolmaking.

IOffice offers you an allround service for a tailor-made system. It protects you from annoying EDP tasks and keeps your workstations stable, safe and up to date. The IOffice staff will be happy to assist you with any questions or comments you may have.

"The constant contact to our users and an understanding for their work together with our ability and desire to develop the best and most comprehensive product of this kind for this branch, makes the IOffice MoldManager such a convincing solution!"

Ingo Kuhlmann Managing Director of IOffice GmbH

MoldManager

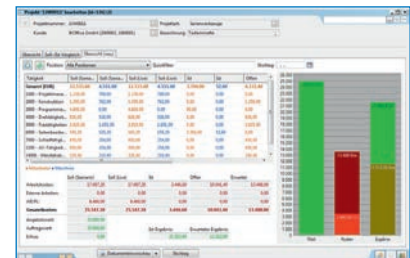

PRACTICAL PLANNING

The IOffice MoldManager makes planning that meets the needs of project-oriented work in tool, mold, model and fixture construction possible. Unnecessary planning is thus avoided! The rapidly changing reality is displayed simultaneously in the system and does not have to be recreated with great effort. All process participants are provided with an overview in a system that is easy to understand and can be intuitively operated. Bottlenecks are identified and free capacities uncovered – everything you need at a glance! The result is a work plan for the day, for the week, for the group or the person – always just as precisely and quickly as you wish!

CONTROL AND INFORMATION

Has the enquiry been processed yet? Has the quotation been sent yet? Were we too expensive last time? How high is our order backlog? Has that been ordered already? Has the invoice come in yet? Have we invoiced everything? The IOffice MoldManager answers all these and many other questions in a simple and clear manner. Because it is directly tailored to your industry, tedious, lengthy training courses are no longer necessary. You will find your way around it immediately! The integrated document management makes matching all information with your project easy. The IOffice MoldManager collects information in all business areas and makes it available to you in a clear, quick and concise manner!

FEATURES

-  Capacity scheduling
-  Project management
-  Tool calculation
