IKOffice **License Explanations**
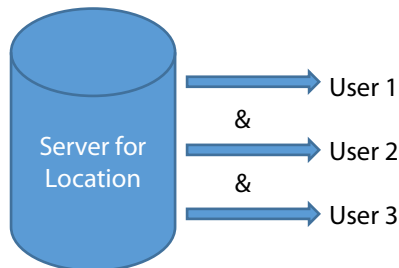

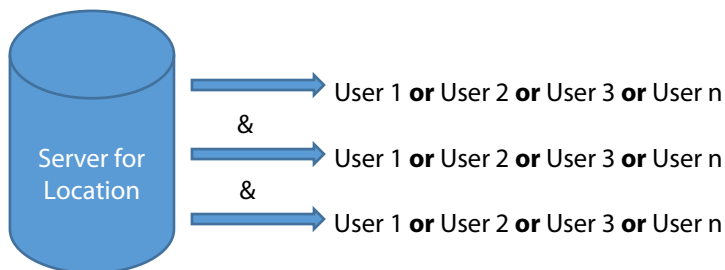

Depending on the location, you can choose different user license models:

1. Named user license. Ex: Three named users can log in.

Server for Location	→	User 1
&		
→		User 2
&		
→		User 3

2. Concurrent user license. Ex: Any three users can log in.

| Server for Location | → | User 1 **or** User 2 **or** User 3 **or** User n |
&		
→		User 1 **or** User 2 **or** User 3 **or** User n
&		
→		User 1 **or** User 2 **or** User 3 **or** User n

The following server license variants are available for supplying two or more sites:

Variant 1 is necessary if the clients work in different time zones, because a server can only exist in one time zone (additional effort for server maintenance)

Variant 2, if cross-client "special developments" are to be implemented, e.g. order from client 1 to client 2. With variant 2 only one server maintenance is necessary

1. One server license per site (highest availability, best performance)

| Server for Location 1 | → | Client | Server for Location 2 | → | Client |

2. One server license and one client per site (availability and performance depend on connection)

| Server for Location 1 | → | Client |
| | → | Client 2 |
