

## IKOffice System requirements

The IKOffice system is a client-server application. As a client, any Windows version from Windows 7 SP2 is required. However, we recommend the use of a currently supported version, preferably in a 64bit edition.

### System requirements for **clients**

OS:	Windows (from Windows 7 SP2) or MS Terminal Server or Citrix Server in comparable versions
CPU:	Min 1.8Ghz, Core i5 recommended
Memory:	Min. 4GB, 8GB recommended, 16GB recommended on AV machines (due to planning)
Hard disk:	500MB free space

### System requirement for the **server**

OS:	Provided by us
CPU:	Min. 4 cores á 2Ghz, recommended 8 cores á 2,7Ghz
Memory:	Min. 12GB, recommended 16GB, more than 32GB not necessary
Harddrive:	Min. 50GB, more if many files are stored in the system
Network:	One network card

### System requirement for the **network**

IKOffice still functions reasonably in networks with a latency of 50ms and can therefore also be used without problems via VPN connections. The use of remote desktop connection to terminal servers is also explicitly supported by IKOffice.

### System requirement for the **virtualisation host**

The following virtualisation hosts are supported:

- VMware ESX Server
- Oracle VirtualBox
- Microsoft Hyper-V
- Linux KVM
